Resource: Ch. 18 of Wide Area Networks

Due Date: Day 7 [Individual forum]

Discuss four different types of wireless technologies in a 350- to 700-word paper in APA format.

Describe the characteristics and properties of each signal type, and how each can be used.

Include a table or matrix that compares properties of the four signal types.

Provide a hypothetical situation for each signal type that illustrates how it could be, or is being, used in a WAN. In what circumstance, for example, would a company choose to use a satellite signal?

Post your paper as a Microsoft® Word attachment
